

# HEPATITIS A OUTBREAK IN MICHIGAN JULY 20, 2018

MACEY LADISKY, MPH, EPIDEMIOLOGIST, DIVISION OF COMMUNICABLE DISEASE OF MDHHS TERRI ADAMS, RN, BSN, MM, SECTION MANAGER, DIVISION OF IMMUNIZATION OF MDHHS

## **OVERVIEW**

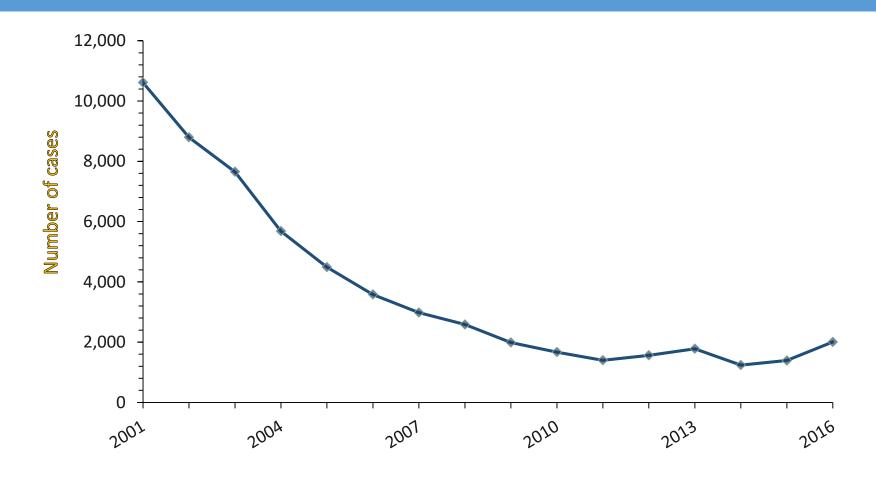

- Basics of Hepatitis A
- Hepatitis A Epidemiology in the USA
- Update on the Hepatitis A Outbreak
- Vaccine Numbers & Supply Update
- Current Outreach

#### **HEPATITIS A**

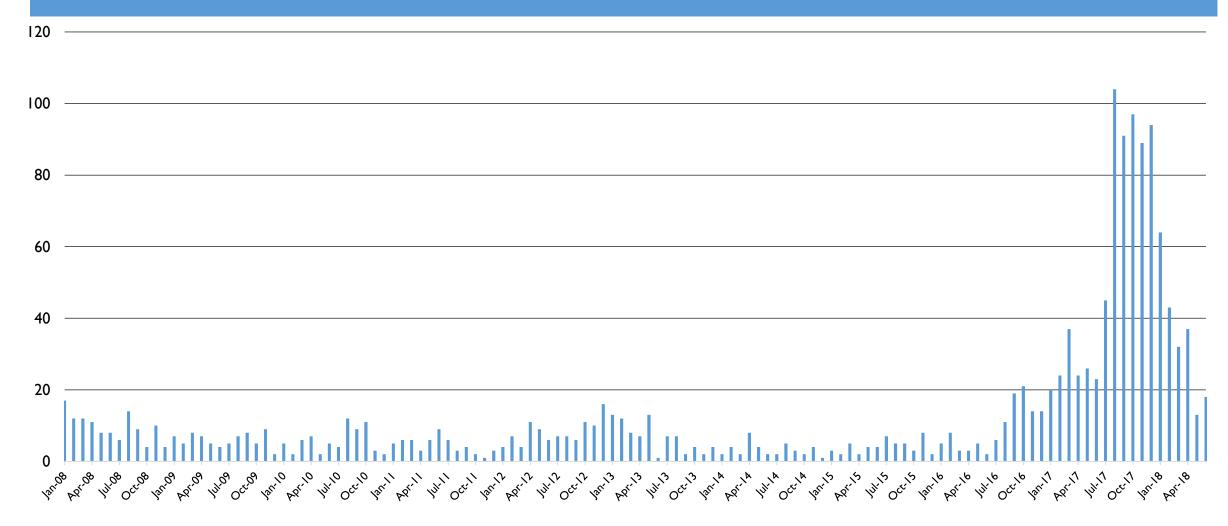

- Highly contagious, vaccine-preventable (acute) liver infection
- "Hearty" virus that cannot be inactivated using alcohol-based hand sanitizer
- Spread most commonly from person-to-person by the fecal-oral route or ingestion of contaminated food or water
- Incubation Period illness can appear 15 to 50 days after exposure (Average 28 days)
- Can cause liver infection lasting a few weeks to a serious illness lasting several months

Confirmed Cases Referred August 1, 2016 – July 11, 2018 Meeting the MI Hepatitis A Outbreak Case Definition

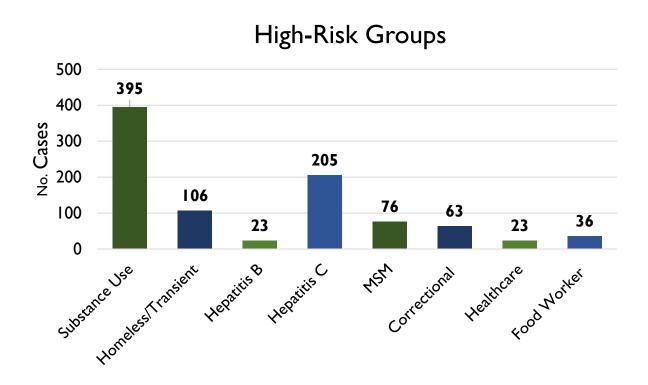

# Confirmed Cases Referred August 1, 2016 – July 11, 2018 Meeting the MI Hepatitis A Outbreak Case Definition

County (or city)	Total Cases	
Macomb	220	
City of Detroit	173	
Wayne	144	
Oakland	117	
St. Clair	34	
Monroe	18	
Genesee	22	
Shiawassee	13	
Midland	3	

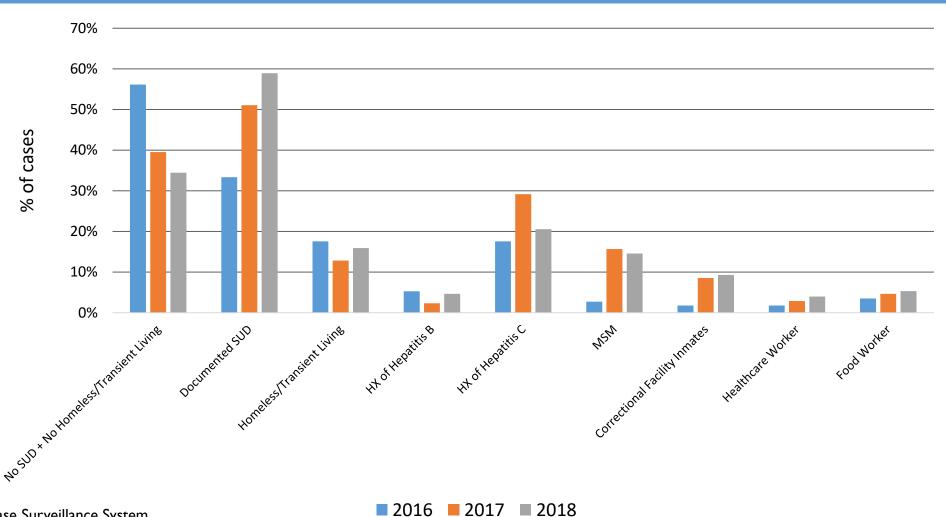

# RISK GROUPS

## RISK GROUPS – EXCLUDES SECONDARY CASES

- Reported Substance Use Disorder(injected or non-injected)
- Homeless/Transient Living
- History of Hepatitis B
- History of Hepatitis C
- Men Who Have Sex With Men
- Correctional Facility Inmates

# HIGH-RISK GROUPS BY YEAR AUGUST 1, 2016 – JULY 11, 2018

# HEPATITIS A IMMUNIZATION UPDATE

## HEPATITIS A IS A VACCINE-PREVENTABLE DISEASE

- Vaccine highly effective in preventing clinical hepatitis A
  - Nearly I 00% protection with two doses
    - 90-95% protection with one dose
  - Long term immunity (> 25 years)
- 2 shot series, given 6 months apart
  - Due to vaccine supply constraints, MDHHS is currently recommending administration of the first dose only to protect individuals against the Michigan outbreak.

SHOULDER INJURY RELATED TO VACCINE ADMINISTRATION (SIRVA)

- Occurs after incorrect administration of a vaccine intended for IM injection in the deltoid muscle (upper arm)
  - Inflammatory reaction as a result of unintended injection of vaccine antigen and/or trauma from the needle into and around the underlying bursa of the shoulder
  - Causes shoulder pain and limited range of motion
  - Onset of symptoms occurs less than or equal to 48 hours after vaccine administration

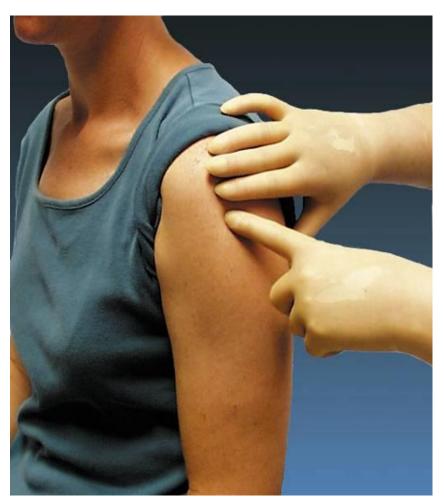

Images Courtesy of CDC

# PRACTICE PROPER IM INJECTION TECHNIQUE

- When administering an IM injection into deltoid muscle, follow these steps:
  - Administer in thickest,
     most central part of the muscle
  - Use needle length based
     on patient's age and weight
  - Use a 90° angle when inserting the needle into the muscle

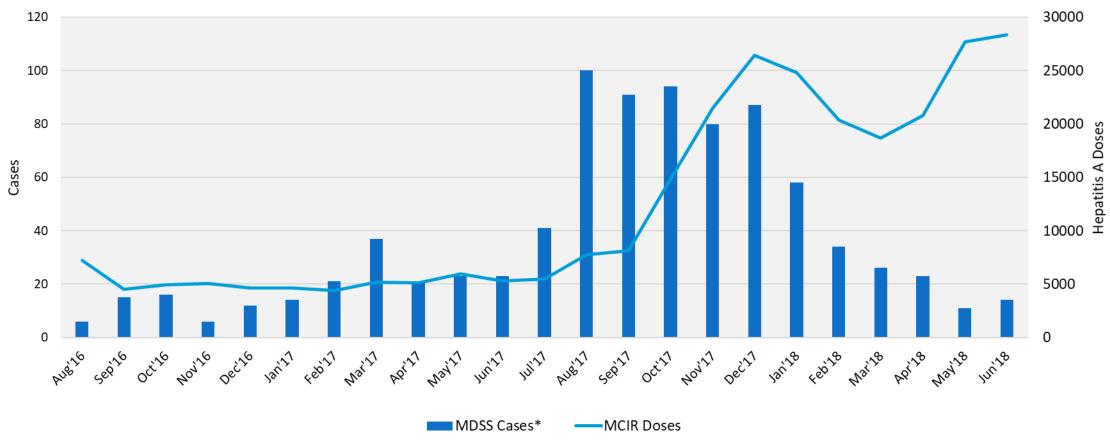

**Image Courtesy of CDC** 

#### **OVERVIEW**

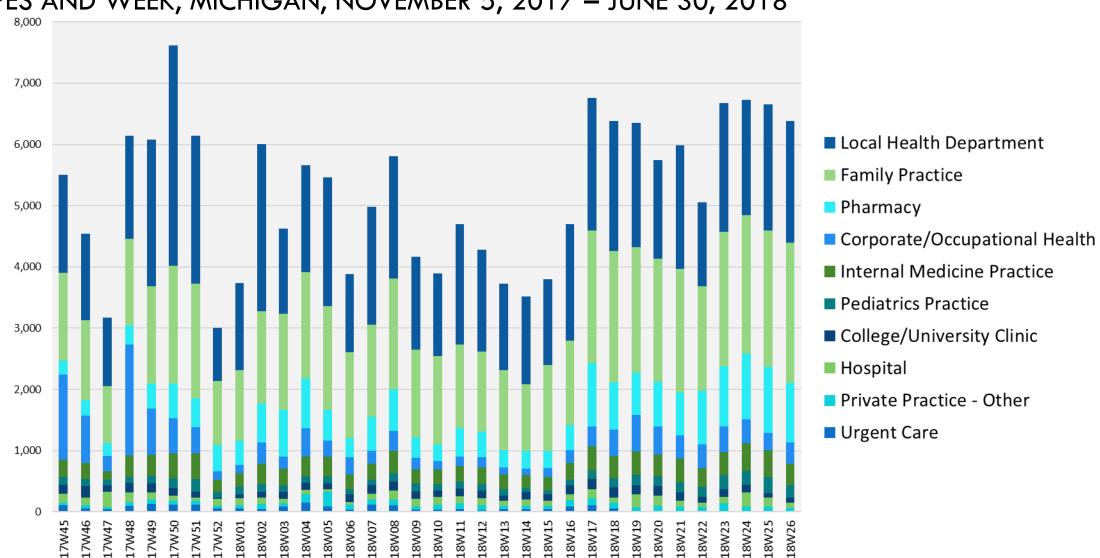

- 180,086 outbreak doses have been administered and reported to the MCIR for adults 18+.
- LHDs, family practices, and pharmacies continue to be our top reporters since the end of November.
- Michigan's I + coverage estimate for adults 19+ is at 15.3%.

# HEPATITIS A CASES VS. HEPATITIS A DOSES ADMINISTERED AND REPORTED TO THE MCIR FOR ADULTS 18 YEARS OF AGE AND OLDER BY MONTH, MICHIGAN, AUGUST 2016 - JUNE 2018

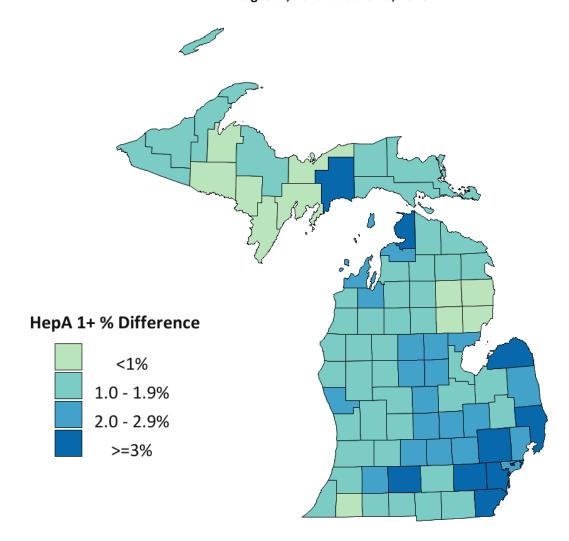

<sup>\*</sup>N=847 includes primary, secondary, tertiary confirmed or probable cases from August 2016 MDSS data as of July 6, 2018 MCIR data as of July 7, 2018

HEPATITIS A VACCINE DOSES ADMINISTERED AND REPORTED TO THE MCIR FOR ADULTS 18 YEARS OF AGE AND OLDER RESIDING IN OUTBREAK COUNTIES BY THE TOP TEN MCIR FACILITY TYPES AND WEEK, MICHIGAN, NOVEMBER 5, 2017 – JUNE 30, 2018

#### Adult Hepatitis A Coverage Percent Difference by County, MCIR

August 1, 2016 vs. June 23, 2018

#### **VACCINE SUPPLY**

#### Constrained vaccine

- Focus on first dose
- Prioritize outreach in community to high risk populations
- Report all doses to MCIR
- Utilize private stock and bill private insurance when feasible
- Encourage FQHC's/Health Centers to enroll in MDHHS adult vaccine program (MI-AVP)
  - Local Health Departments are contact for enrollment

# **OUTREACH RESPONSE**

## HIGH-RISK GROUPS

#### **Substance Use Disorder**

- Drug treatment centers
  - Inpatient
  - Outpatient
- Methadone clinics
- Drug courts
- Half-Way houses
- Peer ambassadors

#### Men Who Have Sex With Men

- Pride events
- Gay bars
- LGBTQ shelters
- Parks

#### **Homeless/Transient Living**

- Parks
- Libraries
- Shelters/Motels
- Soup Kitchens
- Churches

#### **Correctional Facility Inmates**

- Offering vaccine at intake and outtake
- And during health physicals

## **FESTIVALS UPDATE**

This Summer the Local Health
Departments have been
targeting festivals where hard
to reach, high-risk populations
are in attendance.

They have been focusing on providing outreach in these venues including:

- Providing handwashing stations
- Offering vaccinations on-site or off-site
- Providing education materials and discussing Hepatitis A and prevention

# **FESTIVALS** MAY 19 – JULY 7, 2018

- Total vaccination administered at festivals, 466
- Total number of festivals attended as of July 2018, 24
- Several more events upcoming from now through September, 2018

during Electric Forest

#### **SUMMARY**

- Go to the target population! Don't wait for them to come to you
- Consistency builds trust → increases uptake
- LHDs can request staffing support from VNA
- FQHCs/Health Centers can play a major role to reach high risk adults
- Remain diligent with ongoing assessment
- Neighboring states are struggling with outbreaks, it can easily escalate in Michigan again!

We are all in this together!
